Description

Bacillus subtilis, known also as the hay bacillus or grass bacillus, is a Gram-positive, catalase-positive bacterium, found in soil and the gastrointestinal tract of ruminants and humans. A member of the genus Bacillus, B. subtilis is rod-shaped, and can form a tough, protective endospore, allowing it to tolerate extreme environmental conditions. B. subtilis has historically been classified as an obligate aerobe, though evidence exists that it is a facultative aerobe. B. subtilis is considered the best studied Gram-positive bacterium and a model organism to study bacterial chromosome replication and cell differentiation. It is one of the bacterial champions in secreted enzyme production and used on an industrial scale by biotechnology companies. In this report bacillus subtilis is used as feed additives and bio pesticide other industry. Market competition is not intense. Bayer, Basf, Qunlin and Jocanima, etc. are the leaders of the industry, with about 55% market shares. China is the largest consumption place, with a sales revenue market share nearly 33%. Following China, North America is the second largest consumption place with the sales revenue market share of 26%.
