Description

Succulent plant, also known as succulents, are plants whose parts thicken, are succulent, and are full of food. The leaves, stems, or roots of these plants become more fleshy than usual due to the development of aquifer tissue. Succulents are higher plants with hypertrophic vegetative organs, usually with three vegetative organs: root, stem and leaf, flower, fruit and seed. Compared to other plants, succulents survive easily, do not require the care of the breeder for a long time, and are radiation proof, decorative and air purifying. Succulents need little maintenance to survive indoors. Because it is the houseplant with very strong adaptability, can flourish below all sorts of indoor conditions.

The main global Succulent Plant players include Altman Plants, COSTA FARMS, Zhejiang Wanxiang Flowers, etc. The top three Succulent Plant players account for approximately 21% of the total market. Europe is the largest consumer market for Succulent Plant, accounting for about 46%, followed by North America and Asia-Pacific. In terms of type, Aizoaceae is the largest segment, with a share over 23%. And in terms of application, the largest application is Household, followed by Commercial.
