Description

Diesel Cars used diesel engine which means fuel is mixed with air as it goes into the engine and that mixture is compressed internally, inside the engine’s cylinders. At some point, the fuel ignites (combusts), driving a piston down and turning the crankshaft, which is connected to the vehicle’s transmission and ultimately turns the wheels. The piston then moves up in the cylinder, pushing the burnt gases out of the engine and out the tailpipe as exhaust. This cycle repeats several times per second.

Global Diesel Cars key players include Volkswagen, Daimler, BMW, etc. Global top three manufacturers hold a share over 30%.

Europe is the largest market, with a share over 55%, followed by China, and India, both have a share about 25 percent.

In terms of product, More Than 3.0 L is the largest segment, with a share over 40%. And in terms of application, the largest application is Commercial Vehicle, followed by Passenger Vehicle.
