### Description

Utility Task Vehicles (UTVs) are off-highway, motorized utility vehicles with side-by-side seating, steering wheel control and a rollover-protective structure, designed to carry two or more occupants plus tools, materials or small equipment over unpaved terrain in work and mixed work–recreation environments. They typically have four or more low-pressure tires, a short wheelbase and high ground clearance, and are powered by small internal combustion engines or electric drive systems with automatic transmissions and selectable two- or four-wheel drive. Compared with all-terrain vehicles (ATVs, straddle-seat vehicles), UTVs emphasize payload, towing capacity, cargo box volume and accessory mounting (e.g. sprayers, winches, plows) rather than single-rider agility, and are widely used in agriculture, forestry, construction, facility maintenance, public services and outdoor recreation where a compact off-road utility platform is required but on-road performance and homologation are secondary.

The global Utility Task Vehicles (UTVs) market was valued at US\$ million in 2025 and is projected to reach US\$ million by 2032, implying a CAGR of % over 2026–2032.
