Description

Desulfurization gypsum, also known as FGD gypsum (flue gas desulfurization gypsum), is an industrial by-product gypsum obtained by desulfurization and purification of flue gas generated after combustion of sulfur-containing fuel (coal, oil, etc.), and its composition is calcium sulfate dihydrate (CaSO4.2H2O). Desulfurization gypsum is mainly a by-product of thermal power plants.

The industry is crowded with manufacturers and fiercely competitive. Major producers are Tuoketuo Power Station, Taichung Power Plant and Kashima Power Station, with revenue ratios of 0.51%, 0.45% and 0.38% in 2019.

Report Scope

This report quantifies the global Desulphurization Gypsum market in revenue (US\$ million) and, where applicable, sales volume (Kiloton), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of types and applications, harmonizes vendor attribution, and presents comparable time series by company, type, application, and region/country, including indicative price bands (US\$/Kiloton) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for manufacturers, new entrants, channel partners, and investors; the report also reviews technology shifts and notable product introductions relevant to Desulphurization Gypsum.

Key Companies & Market Share Insights

This section profiles leading manufacturers, combining 2021–2025 results with a 2026–2032 outlook. It reports revenue, market share, price bands, product and application mix, regional and channel mix, and key developments (M&A, capacity additions, certifications). It also provides global revenue, average price, and—where applicable—sales volume by manufacturer, and calculates CR5/CR10 and rank changes to support comparative benchmarking.
