Description

A nebulizer changes medication from a liquid to a mist so that it can be more easily inhaled into the lungs. Nebulizers are particularly effective in delivering asthma medications to infants and small children and to anyone who has difficulty using an asthma inhaler. It is also convenient when a large dose of an inhaled medication is needed. Nebulized therapy is often called a "breathing treatment." And a variety of medications - - both for immediate relief and maintenance of asthma symptoms -- are available for use with a nebulizer. Global Inhalation Therapy Nebulizer key players include PARI GmbH, Omron, Drive DeVilbiss Healthcare, Philips Respironics, Yuwell, etc. Global top five manufacturers hold a share about 50%. North America is the largest market, with a share about 40%, followed by Europe, with a share about 30 percent. In terms of product, Pneumatic Nebulizers is the largest segment, with a share about 55%. And in terms of application, the largest application is Asthma, followed by COPD, Cystic Fibrosis, etc.
