Description

Polyimide film is a monorphic polymer and an advanced polymer material. Because it has a very strong molecular structure, its performance is extremely high among many polymers. Very strong, excellent heat resistance, and excellent electrical insulation. In addition, as organic matter has a low rate of expansion relative to heat, even when used at high temperature, the dimension error caused by expansion can be prevented. It is a film that is often used for temporary use in high temperature, such as masking of a packaging substrate. Global Polyimide Film (PI Film) key players include DuPont, Kaneka, SKC Kolon, etc. Global top three manufacturers hold a share over 70%. Japan is the largest market, with a share about 40%, followed by United States and China, both have a share about 40 percent. In terms of product, Pyromellitic Type is the largest segment, with a share about 80%. And in terms of application, the largest application is Consumer Electronics, followed by Aerospace.

Report Scope

This report quantifies the global Polyimide Film (PI Film) market in revenue (US\$ million) and, where applicable, sales volume (t), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
