Description

Polyphenylsulphone (PPSU) is an amorphous plastic. This material combines a high melting temperature with quite a low moisture absorption. Furthermore, it has better impact strength and chemical resistance than PSU and PES from the polysulphone group. Apart from these characteristics, PPSU can be better sterilized with superheated steam than other members of this group of polymers, and is resistant to detergents and disinfectants.

Global PPSU key players include Solvay, BASF, Quadrant, Ensigner, etc.

The report provides an overview of the global PPSU market in terms of capacity, output, revenue, and price, analyzing global market trends using historical revenue and sales data for 2021-2025, estimates for 2026, and projected CAGRs through 2032.

The study covers key producers of PPSU and consumption patterns in major regions and countries, assesses future market potential, and highlights priority regions and countries for segmenting the market into sub-sectors, with country-specific market value data for the U.S., Canada, Mexico, Brazil, China, Japan, South Korea, Southeast Asia, India, Germany, the U.K., Italy, the Middle East, Africa, and other countries.

The report also presents PPSU sales, revenue, market share, and industry ranking for the main manufacturers for 2021-2026, identifies the major stakeholders in the global market, and analyzes their competitive landscape and market positioning based on recent developments and segmental revenues.

In addition, the report analyzes segment data by type and application—covering sales, revenue, and price—for 2021-2032, and evaluates and forecasts the PPSU market size, projected growth trends, production technologies, key applications, and end-use industries.
