Description

The concrete release agent refers to a substance applied to the construction formwork before the concrete is poured, so that the formwork does not stick to the concrete surface after casting, is not easy to demolish, or affects the smoothness of the concrete surface. Its main function is to form a film on the surface of the concrete and the concrete to separate the two, so it is also called a release agent.

Sika has the largest share in the Precast Concrete Release Agents market, which account for 1.81% of production in 2018.
