Description

Silicon nitride ceramics offer high thermal, shock, and impact resistance. Silicon nitride ceramics is superior to other materials due to its thermal shock resistance. It does not deteriorate at high temperatures, so it's used for automotive engines and parts for gas turbines, including the turbocharger rotor. It is widely used in Cutting Tools, Bearing Rolling Elements, Automotive Components (rollers/pads), Oil&Gas Components industry. As to the silicon nitride ceramics downstream application, Cutting Tools is its largest downstream market, which shares 28% of the consumption.

The sales of silicon nitride ceramics is through reaction sintering method (RS), Constant-pressing sintering method (CPS), gas-pressing sintering method (GPS), etc. RS is the most popular method for producing silicon nitride ceramics, which takes up 51% global consumption.

At present, the sales of silicon nitride ceramics distributed evenly in North America, Europe and Asia-Pacific. Europe is the largest consumption region of silicon nitride ceramics in the world. The Europe market market took up about 38% the global sales, followed by North America (32%).

Kyocera, Ortech, Ceramtec, and 3M are the key suppliers in the global immortelle extract market, with about 35% market shares.
