Description

Pearlescent pigments are pigments with particular layered structures which make the light reflect at different levels. Under the right circumstances, the reflected waves can interfere with each other, causing amplification or cancellation. Depending on the structure of the layers in each case, this creates the brilliant interference color which gives the pigments their unique character.

Solar gold pearlescent pigments are one of the gold series pearlescent pigments. At present, the global headed by Germany Merck, the quality of its products is the best.
