Description

Carbon black (subtypes are acetylene black, channel black, furnace black, lamp black and thermal black) is a material produced by the incomplete combustion of heavy petroleum products such as FCC tar, coal tar, ethylene cracking tar, with the addition of a small amount of vegetable oil. Carbon black is a form of paracrystalline carbon that has a high surface-area-to-volume ratio, albeit lower than that of activated carbon. Global core specialty carbon black manufacturers include Orion Engineered Carbons, Cabot Corporation, Birla Carbon etc. The top 3 companies hold a share about 35%. Asia-Pacific is the largest market, with a share about 60%, followed by Europe and North America with the share about 20% and 15%. In terms of product, lamp black is the largest segment, with a share over 65%. And in terms of application, the largest application is plastics, followed by printing ink.

Report Scope

This report quantifies the global Specialty Carbon Black market in revenue (US\$ million) and, where applicable, sales volume (kt), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
