Description

Superconductor is a material that can conduct electricity or transport electrons from one atom to another with no resistance. This means no heat, sound or any other form of energy would be released from the material when it has reached "critical temperature" (Tc), or the temperature at which the material becomes superconductive. However, most materials must be in an extremely low energy state (very cold) in order to become superconductive.

Global Superconductor key players include Luvata, Bruker, Furukawa, Sumitomo, Jastec, etc. Global top five manufacturers hold a share about 80%. Europe is the largest market, with a share about 40%, followed by North America and Japan, both with a share about 30 percent. In terms of product, LTS is the largest segment, with a share about 95%. And in terms of application, the largest application is Electrical Equipment, followed by Medical Equipment, Big Science Project, Defense & Military, etc.

Report Scope

This report quantifies the global Superconductor market in revenue (US\$ million) and, where applicable, sales volume (Km), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of types and applications, harmonizes vendor attribution, and presents comparable time series by company, type, application, and region/country, including indicative price bands (US\$/Km) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for manufacturers, new entrants, channel partners, and investors; the report also reviews technology shifts and notable product introductions relevant to Superconductor.

Key Companies & Market Share Insights

This section profiles leading manufacturers, combining 2021–2025 results with a 2026–2032 outlook. It reports revenue, market share, price bands, product and application mix, regional and channel mix, and key developments (M&A, capacity additions, certifications). It also provides global revenue, average price, and—where applicable—sales volume by manufacturer, and calculates CR5/CR10 and rank changes to support comparative benchmarking.
