### Description

Tantalum was discovered in 1802 by A.G. Ekeberg in Uppsala, Sweden. Tantalum is a shiny, silvery color metal which is heavy, dense, malleable and ductile when pure. It is found in small quantities in minerals (generally in conjunction with niobium), and is isolated by conversion to the oxide and then the fluoro-complex, K<sub>2</sub>TaF<sub>7</sub>, from which the pure metal is obtained by electrolysis. Tantalum is extremely corrosion resistant due to the formation of an oxide film, and is also resistant to acid attack (with the exception of HF). It will react with fused alkalis and a variety of non-metals at elevated temperatures.

The classification of tantalum tube includes Ta Tube, Ta-2.5W Tube, Ta-10W Tube, and other area, and the proportion of Ta-2.5W Tube is about 44%.

Tantalum tube is widely used in chemical industry, aerospace & military, machinery and other field. The most proportion of tantalum tube is chemical industry.

USA region is the largest supplier of tantalum tube, with a production market share nearly 63%. China is the second largest supplier of tantalum tube, enjoying production market share nearly 19%.

USA is the largest consumption place, with a consumption market share about 69%. Following USA, China is the second largest consumption place with the consumption market share of 16%.

Market competition is not intense. H.C. Starck, Global Advanced Metals and PLANSEE are the top 3 players of Tantalum Tube, with about 74% market shares.
