Description

Thermally Modified Wood is referring to a wood which is modified by a controlled pyrolysis process. In this process, the wood is heated up to 180°Celsius, in the absence of oxygen. This process helps the chemical to change its cell structure of cell wall components in the wood in order to increase its durability. During this process, the low oxygen content prevents the wood from burning even at the high temperature. There are five thermal modification processes: Thermowood, Retification Process, Les Bois Perdure, Plato Process, and Oil Heat Treatment.

Global Thermally Modified Wood key players include Arbor Wood, Lunawood, SWM-Wood, Stora Enso, Thermory, Cambia by NFP, timura Holzmanufaktur GmbH, Novawood, Karava, Thermoarena OÜ, Bingaman & Son Lumber, Inc., Hardwoods, etc. Global top twelve manufacturers hold a share about 10%.

Europe is the largest market, with a share about 35%, followed by North America and Central & South America, both have a share over 40 percent.

In terms of product, Thermo-S is the largest segment, with a share about 50%. And in terms of application, the largest application is Residential, followed by Commercial.
