Description

Thermoplastic polyamide elastomers are high-performance thermoplastic elastomer (TPE) block copolymers, based on nylon and polyethers or polyesters. PAEs consist of alternating hard and soft segments joined by amide linkages. They are used mainly in areas where other thermoplastic elastomers cannot compete or perform, especially at lower temperature. Moreover, PAEs can be processed by usual melt-processing techniques, such as injection molding, extrusion, blow molding, rotational molding and thermoforming. Thermoplastic polyamide, belongs to the thermoplastic elastomer family. Thermoplastic elastomers are generally low modulus, flexible materials that can be stretched repeatedly to at least twice their original length at room temperature with an ability to return to their approximate original length when stress is released. The grandfather materials with this property are thermoset rubbers, but many families of injection-moldable thermoplastic elastomers (TPEs) are replacing traditional rubbers. In addition to use in their basic form, TPEs are widely used to modify the properties of rigid thermoplastics, usually improving impact strength. This is quite common for sheet goods and general molding TPEs.

Report Scope

This report quantifies the global Thermoplastic Polyamide market in revenue (US\$ million) and, where applicable, sales volume (MT), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
