### Description

Thick film ceramic substrate refers to ceramic substrate processed by thick film technology. The thick film ceramic substrate is a post-fired ceramic substrate. "Thick Film" refers to the thickness of conductor layer on Ceramic Substrate. Normally the thickness will be at least exceeds 10 miron (um), around 10~100um, more thick than spurting technology in Thin Film Ceramic Substrate. Of course thickness is less than DCB Ceramic board or FR4 board.

Global thick film ceramic substrates key players include Noritake, NCI, Miyoshi Electronics Corporation, etc. Global top 3 manufacturers hold a share over 27%.

Asia-Pacific is the largest market, with a share about 37%, followed by North America and Europe, both have a share about 56 percent.

In terms of product, alumina thick film substrates is the largest segment, with a share about 77%. And in terms of application, the largest application is automotive & sensors, followed by industrial & medical.
