Titanium Sputtering Target is a material that is used to create thin films in a technique known as sputter deposition, or thin film deposition. During this process the titanium, which begins as a solid, is broken up by gaseous ions into tiny particles that form a spray and coat another material, which is known as the substrate. Sputter deposition is commonly involved in the creation of semiconductors and computer chips.

By region, the Asia-Pacific region had the highest share of income in 2019, at more than 56 percent. The industry's leading producers are JX Nippon, Tosoh and Honeywell Electronic Materials, which together account for 40.79% of revenues.
