Description

Thermoplastic Polyester Elastomer (TPEE) is a block copolymer who contains a hard segment of polyester and a soft segment of polyether; wherein the amorphous is formed from the soft segment of polyether and the uncrystallized polyester. Micro-crystals play a role as physical crosslinking points formed from the hard segment of the polyester. Thermoplastic polyester elastomer has the rubber elasticity and strength of engineering plastics. Soft segment gives it flexibility to make it like rubber; hard segment assigns the processing properties which makes it like plastic. Compared with rubber, it has a better processing performance and longer life; and the same high strength characteristics compared to plastic, while the flexibility and dynamic mechanical properties is better.

Global TPEE (Thermoplastic Ester Elastomer) key players include DuPont, Celanese, DSM, Taiwan Changchun, etc. Global top four manufacturers hold a share over 50%.

Europe is the largest market, with a share about 30%, followed by China, and North America, both have a share over 40 percent.

In terms of product, Injection Molding Grade is the largest segment, with a share over 50%. And in terms of application, the largest application is Automotive Industrial, followed by Industrial Products, Consumer Products, etc.
