Description

The Triacetin 1,2,3-triacetoxyp propane is more generally known as triacetin and glycerin triacetate. It is the triester of glycerol and acetic acid, and is the second simplest fat after triformin. Triacetin is readily soluble in aromatic hydrocarbons and most organic solvents. It is insoluble in aliphatic hydrocarbons, mineral oils, and vegetable and animal oils. Solubility in water is low.

Triacetin is found in some food like butter as it is used as a food additive for the solvency of flavourings for the function of humectant. It is used in perfumery and cosmetics for these applications. It is used as an antifungal agent in external medicine for topical treatment of superficial fungal infections of the skin. Triacetin is applied to cigarette filter as a plasticizer. It is used as a gelatinizing agent in explosives.

Under suitable conditions, Triacetin can be stored for one year. Triacetin can be stored in a stainless steel tank.

The global Triacetin industry has a rather high concentration. The major manufacturers are concentrated in China, North America, Europe and Japan, such as Eastman, Lanxess, BASF, Daicel and Jiangsu Ruijia. At present, Jiangsu Ruijia is the world leader, holding 23% production market share.
