Description

Urea, also known as carbamide, is an organic compound with chemical formula $\text{CO}(\text{NH}_2)_2$. This amide has two -NH_2 groups joined by a carbonyl (C=O) functional group.

Urea serves an important role in the metabolism of nitrogen-containing compounds by animals and is the main nitrogen-containing substance in the urine of mammals. It is a colorless, odorless solid, highly soluble in water, and practically non-toxic (LD50 is 15 g/kg for rats). Dissolved in water, it is neither acidic nor alkaline. The body uses it in many processes, most notably nitrogen excretion. The liver forms it by combining two ammonia molecules (NH_3) with a carbon dioxide (CO_2) molecule in the urea cycle. Urea is widely used in fertilizers as a source of nitrogen and is an important raw material for the chemical industry.

Global Urea key players include QAFCO, Yara, KOCH, SABIC, OCI, etc. Global top five players hold a share about 20%.

Asia-Pacific is the largest market, with a share about 60%, followed by Europe and North America, having a total share about 30 percent.

In terms of product, Large Granule Urea is the largest segment, with a share about 76%. And in terms of application, the largest application is Agriculture, followed by Industry.
