Description

Volatile corrosion inhibitors (VCI) are a type of corrosion inhibitor that are used to protect ferrous materials and nonferrous metals against corrosion or oxidation where it is impractical to apply surface treatments. They slowly release compounds within a sealed airspace that actively prevents surface corrosion. A typical application is to protect stored tools or parts inside bags, boxes or cupboards, one advantage of VCIs being that if the container is opened and reclosed, levels of inhibitor will recover.

Global VCI Anti Rust Paper key players include CORTEC, Branopac, Armor Protective Packaging, Zerust, Daubert VCI, etc. Global top five manufacturers hold a share about 50%. North America is the largest market, with a share about 40%, followed by Europe, with a share about 25 percent. In terms of product, VCI paper for ferrous metals is the largest segment, with a share about 50%. And in terms of application, the largest application is Metalworking, followed by Metal Forging and Die Casting, Metal Producing, Finished Products, etc.
