Description

A safe and reliable pitch system is critical for the wind turbine’s performance and power production. Wind turbine pitch control system can change incidence of rotor blades in a wind power generation system based on real-time wind speed for the purpose of adjusting output power, achieving higher utilization efficiency of wind power and providing protection for rotor blades. When wind speed is not higher than the rated speed, the blade incidence stay near the angle 0° (highest power point), which is similar to that of a generator with constant pitch, generating an output power that changes along with wind speed. Europe is the largest Wind Turbine Pitch Systems market with about 45% market share. China is follower, accounting for about 40% market share.

The key players are Vestas, Siemens, Enercon, Siemens(Gamesa), MOOG, SSB, Mita-Teknik, Parker hannifin, Bosch Rexroth, Atech, DEIF Wind Power, MLS, OAT, AVN, DHI•DCW, Beijing Techwin, Huadian Tianren, REnergy Electric, DONGFENG Electric, Corona, Ree-electric/Reenergy, Chongqing KK-Qianwei, Chengdu Forward, Lianyungang Jariec etc. Top 3 companies occupied about 23% market share.

Report Scope

This report quantifies the global Wind Turbine Pitch Systems market in revenue (US\$ million) and, where applicable, sales volume (Sets), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
