### Description

A wetsuit is a special garment, usually made of foamed neoprene, which is worn by surfers, divers, windsurfers, canoeists, and others engaged in water sports, providing thermal insulation, abrasion resistance and buoyancy.

Wetsuits are used for thermal insulation for activities where the user is likely to be immersed in water, or frequently doused with heavy spray, often approaching from near-horizontal directions, where normal wet-weather clothing is unlikely to keep the water out.

The insulation properties depend on bubbles of gas enclosed within the material, which reduce its ability to conduct heat. The bubbles also give the wetsuit a low density, providing buoyancy in water.

Global Wetsuits key players include O'Neill, Quiksilver, Billabong, Rip Curl, Body Glove, etc. Global top five manufacturers hold a share over 65%.

USA is the largest market, with a share over 35%, followed by Oceania and Europe, both have a share over 35%.

In terms of application, the largest application is Leisure and Sports, followed by Professionals, Military, etc.

### Report Scope

This report quantifies the global Wetsuits market in terms of revenue (US\$ million) and, where applicable, sales volume (K Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
