Description

A KVM switch (with KVM being an abbreviation for "keyboard, video and mouse") is a hardware device that allows a user to control multiple computers from one or more keyboard, video monitor and mouse. Although multiple computers are connected to the KVM, typically a smaller number of computers can be controlled at any given time.

KVM over IP solutions (also known as IP KVM switches or digital KVMs) provide secure bios level access and control of servers and network devices utilizing a browser via the network. KVM over IP solutions can be used to enhance or to replace in-band solutions such as RDP, VNC, SSH or other out-of-band access solutions such as remote access cards for a reliable and secure way to manage an IT infrastructure.

That is to say KVM over IP are for simultaneous control of multiple computers from a single or multiple sets of keyboard, video monitor and mouse.
