Description

PID Temperature Regulators is a control loop mechanism employing feedback that is widely used in industrial control systems and a variety of other applications requiring continuously modulated control. The temperature controller takes an input from a temperature sensor and has an output that is connected to a control element. A PID controller continuously calculates an error value $e(t)$ as the difference between a desired setpoint (SP) and a measured process variable (PV) and applies a correction based on proportional, integral, and derivative terms (denoted P, I, and D respectively).

Global PID Temperature Regulators includes Schneider Electric, Thermo Fischer Scientific, Yokogawa Electric Corporation, Ascon Technologic and JULABO GmbH, etc. Global top 5 companies hold a share over 44%. North America is the largest market, with a share about 29%, followed by Europe and China with the share about 23% and 20%.

Report Scope

This report quantifies the global PID Temperature Regulators market in revenue (US\$ million) and, where applicable, sales volume (K Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of types and applications, harmonizes vendor attribution, and presents comparable time series by company, type, application, and region/country, including indicative price bands (US\$/K Units) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for manufacturers, new entrants, channel partners, and investors; the report also reviews technology shifts and notable product introductions relevant to PID Temperature Regulators.

Key Companies & Market Share Insights
