Description

A polymer capacitor, or more accurately a polymer electrolytic capacitor, is an electrolytic capacitor (e-cap) with a solid electrolyte of a conductive polymer. Polymer electrolytic capacitors are characterized by particularly low internal equivalent series resistances (ESR) and high ripple current ratings. Their electrical parameters have similar temperature dependence, reliability and service life compared to solid tantalum capacitors, but have a much better temperature dependence and a considerably longer service life than aluminum electrolytic capacitors with non-solid electrolytes. In general polymer e-caps have a higher leakage current rating than the other solid or non-solid electrolytic capacitors. Polymer electrolytic capacitors are mainly used in power supplies of integrated electronic circuits as buffer, bypass and decoupling capacitors, especially in devices with flat or compact design. Thus they compete with MLCC capacitors, but offer higher capacitance values than MLCC, and they display no microphonic effect.

Global Polymer Capacitor key players include Murata Manufacturing Co, NCC (Chemi-con), Panasonic Corporation, Nichicon, Kemet, etc. Global top five manufacturers hold a share about 65%. China is the largest market, with a share about 40%, followed by Japan, with a share about 25 percent. In terms of product, Polymer Aluminum Electrolytic Capacitor is the largest segment, with a share about 80%. And in terms of application, the largest application is Consumer Electronics, followed by Industrial, Automotive, etc.
