### Description

Power semiconductor is the core of electrical energy conversion and circuit control in electronic devices. In essence, it is the function of power switch and power conversion by utilizing the one-way conductivity of semiconductor.

In 2018, the top 12 power semiconductor manufacturers in the world accounted for 56.35% of the market share. Infineon is the world's largest power semiconductor vendor, accounting for 11.27% of the market, with revenue of about \$4.4 billion in 2018.

### Report Scope

This report quantifies the global Power Semiconductor market in revenue (US\$ million) and, where applicable, sales volume (M Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of types and applications, harmonizes vendor attribution, and presents comparable time series by company, type, application, and region/country, including indicative price bands (US\$/M Units) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for manufacturers, new entrants, channel partners, and investors; the report also reviews technology shifts and notable product introductions relevant to Power Semiconductor.

### Key Companies & Market Share Insights

This section profiles leading manufacturers, combining 2021–2025 results with a 2026–2032 outlook. It reports revenue, market share, price bands, product and application mix, regional and channel mix, and key developments (M&A, capacity additions, certifications). It also provides global revenue, average price, and—where applicable—sales volume by manufacturer, and calculates CR5/CR10 and rank changes to support comparative benchmarking.
