Description

PTC resettable fuses are a step-up from one shot fuses. When a short circuit occurs, they heat up and transition from a low resistance state to a high resistance state. Allowing them to cool down (typically by removing the power) resets them to the low resistance state. PTCs come in both ceramic (CPTC) and polymer (PPTC) types. Ceramic types are used in sensitive application spaces such as telecom where the resistance must not change much after tripping. The polymer type is used in many general electronics applications and is sometimes called alternatively a resettable fuse, or polyswitch.

The key sales markets locate in and Asia-Pacific, North America and Europe. Asia-Pacific takes the sales volume market share of 65%, followed by North America with 16% and Europe with 13%.

Littelfuse, Schurter, Bourns, Eaton, TDK and Polytronics Technology are the top 6 players of PTC Resettable Fuses, with about 65% market shares.
