Description

SRAM (static RAM) is random access memory (RAM) that retains data bits in its memory as long as power is being supplied. Unlike dynamic RAM (DRAM), which stores bits in cells consisting of a capacitor and a transistor, SRAM does not have to be periodically refreshed. Static RAM provides faster access to data and is more expensive than DRAM. SRAM is used for a computer's cache memory and as part of the random access memory digital-to-analog converter on a video card.

The global static random access memory (SRAM) market is dominated by Cypress, Renesas, ISSI, etc. The top three players account for about 80% of the market share.

The United States is the largest market for static random access memory (SRAM) with a market share of about 80 percent, followed by Japan with about 15 percent.
