Description

Strain Gage Based Sensor measures the strain (displacement) of an object under an applied force. When they are adhesively attached to the object under stress (an applied force), they deform with the object. The magnitude of the applied stress can be inferred from changes in the gauge’s electrical resistance due to its deformation.

The major players in global Strain Gage Based Sensor market include KeLi Sensing, HBM, Zemic, etc. The top 3 players occupy about 25% shares of the global market. North America and Europe are main markets, they occupy about 70% of the global market. Alloy Steel Sensor is the main type, with a share about 50%. Industrial Measurement and Control is the main application, which holds a share about 50%.
