Description

Telecentric Camera Objective is a compound lens that has its entrance or exit pupil at infinity; in the prior case, this produces an orthographic view of the subject. This means that the chief rays (oblique rays that pass through the center of the aperture stop) are parallel to the optical axis in front of or behind the system, respectively. The simplest way to make a lens telecentric is to put the aperture stop at one of the lens's focal points. Such lenses are used in machine vision systems because image magnification is independent of the object's distance or position in the field of view.

Telecentric Camera Objective market has several key players, like Moritex Corporation, Sill Optics GmbH & Co. KG, KOWA Company.Ltd., and Edmund Optics. Global giant manufactures mainly distributed in Japan, Europe and China. It has unshakable status in this field. The market is not only influenced by the price, but also influenced by the product performance. The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

Report Scope

This report quantifies the global Telecentric Camera Objective market in revenue (US\$ million) and, where applicable, sales volume (K Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
