### Description

A thyristor is a solid-state semiconductor device with four layers of alternating P- and N-type materials. It acts exclusively as a bistable switch, conducting when the gate receives a current trigger, and continuing to conduct until the voltage across the device is reversed biased, or until the voltage is removed (by some other means).

The main production enterprises of Thyristors Devices are concentrated in Europe, United States, China and Japan. STMicroelectronics, WeEn Semiconductors, Infineon and ON Semiconductor are in a dominant position in global market. STMicroelectronics accounted for about 14% of the global thyristor revenue market share in 2019. Other players accounted for nearly 9%, 8% and 7% including WeEn Semiconductors, Infineon and ON Semiconductor, respectively.

In Europe, total thyristor accounted for about 10 % in 2019. In North America, total thyristor accounted for nearly 13%. The thyristor market in Asia-Pacific accounted for about 70%, in Latin America 3%, and in Middle East and Africa 3%.

The world's largest application of thyristor is in the Consumer Electronic, accounted for about 35% in 2019, followed by Industrial & Power with 31% in 2019.

### Report Scope
