### Description

Transformers for switching power supplies (also known as switch mode power supply transformers and SMPS transformers) are used in a regulated power supply and function to step up or step down voltage or current, and/or provide isolation between the input and output side of a switch mode power supply. On the primary side of a switch mode transformer, the duty cycle (on time) of the input voltage waveform is varied (switched) to deliver a constant output voltage over varying load conditions. Transformers for Switching Power Supplies (SMPS transformers) are designed to operate at frequencies of 10 kHz to 1 MHz. Switch mode transformer (switch mode power supply transformer) power levels now extend into the 50 kilowatt range.

The major players in the global Transformers for Switching Power Supplies market include TDK, Tamura, Triad Magnetics, etc. The top 3 players occupy about 30% shares of the global market. China is the main market, and occupies about 60% of the global market. Single-excited is the main type, with a share over 60%.
