Description

UV (Ultraviolet) Light Disinfection refers to the process that is used to sterilize the water, air, food and beverage and others. UV disinfection equipment uses UV light for the disinfection process and does not involve the usage of chemicals. Hence, UV disinfection is considered more user-friendly and eco-friendly than other types of disinfection equipment. UV light has become an established water treatment disinfection technology due to its extremely effective ability to kill or inactivate many species of disease-causing microorganisms. Ultraviolet light disinfection is effective on bacteria, protozoan parasites (e.g. Giardia, Cryptosporidium), and can also be effective for most viruses, providing sufficiently high UV dosage rates are used.

The leading manufactures of global UV Light Disinfection mainly are Trojan Technologies, Xylem, SUEZ, Halma and Chiyoda Kohan. Trojan Technologies is the largest manufacturer, its revenue of global market exceeds 19%.

Geographically, the global UV Light Disinfection market has been segmented into North America, Europe, China, Japan and RoW. The North America held the largest share in the global market, its revenue of global market exceeds 47%. The next is Europe.
