Description

Varactor Diodes also known as a variable capacitance diode, varicap diode or variable reactance diode, is a diode that has a variable capacitance which is a function of the voltage that is impressed on its terminals. Tuning / varactor diodes are operated reverse-biased, and therefore no current flows. However, since the thickness of the depletion zone varies with the applied bias voltage, the capacitance of the diode can be made to vary. Usually, the capacitance is inversely proportional to the depletion region thickness and the depletion region thickness is proportional to the square root of the applied voltage. Therefore, the capacitance is inversely proportional to the square root of the voltage applied to the diode.

The major players in global Varactor Diodes market include Infineon, NXP, Skyworks Solutions, etc. The top 3 players occupy over 30% shares of the global market. North America and Europe are main markets, they occupy about 50% of the global market. VR below or equal 20V and VR 20V- 30V are the main types, with a share about 90% altogether. Voltage Controlled Oscillators is the key application, which holds a share about 50%.
