Description

Steel utility poles are the utility poles made from steel, and are a column or post used to support overhead power lines and various other public utilities. Utility poles are commonly used to carry two types of electric power lines: distribution lines and sub-transmission lines. Distribution lines carry power from local substations to customers. Transmission lines carry higher voltage power from regional substations to local substations. Global steel utility poles main manufacturers include Valmont Industries, TAPP, Meyer Utility Structures and DAJI Towers, totally accounting for about 33% of the market. Asia-Pacific is the largest market of steel utility poles, holding a share about 36%. As for the application of products, it is widely used in distribution lines and transmission lines. The most common application is in transmission lines, with a share about 74%. As for the types of products, it can be divided into less than 40ft, 40-80ft and more than 80ft. The most common type is less than 40ft, with a share over 67%.

Report Scope

This report quantifies the global Steel Utility Poles market in revenue (US\$ million) and, where applicable, sales volume (K Tons), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
