Description

Wind turbine blade is mounted on the wind turbine. Most wind turbines have three blades, though there are some with two blades. Blades are generally 30 to 50 meters (100 to 165 feet) long, with the most common sizes around 40 meters (130 feet). Longer blades are being designed and tested. Blade weights vary, depending on the design and materials—a 40 meter LM Glasfiber blade for a 1.5 MW turbine weighs 5,780 kg (6.4 tons) and one for a 2.0 MW turbine weighs 6,290 kg (6.9 tons).

Global Wind Turbine Blade key players include Sinoma, Zhongfu Lianzhong, LM Wind Power, Avic, etc. Global top four manufacturers hold a share over 40%.

China is the largest market, with a share about 40%, followed by Europe, and North America, both have a share over 40 percent.

Report Scope

This report quantifies the global Wind Turbine Blade market in revenue (US\$ million) and, where applicable, sales volume (Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
