Description

The Dextrin market, a water-soluble polysaccharide produced by the hydrolysis of starch. Dextrins can be made from almost any starch source, like corn, wheat or potatoes. In this report, we categorize the market into Maltodextrin and Cyclodextrin.

Dextrins are polysaccharides formed by heating dry or acid-modified starches in a process called pyrolysis. They can be used at higher solids levels than native or modified starches, creating stronger bonds, more tack and faster-drying properties than pastes made from unmodified starch.

Global Dextrins key players include Zhucheng Xingmao, Mengzhou Jinyumi, Grain Processing Corp, Roquette, etc. Global top four manufacturers hold a share about 25%.

China is the largest market, with a share about 30%, followed by Europe, and North America, both have a share over 50 percent.

In terms of product, Maltodextrin is the largest segment, with a share over 95%. And in terms of application, the largest application is Food and Beverage, followed by Industrial, Pharm and Cosmetic, etc.

Report Scope

This report quantifies the global Dextrins market in terms of revenue (US\$ million) and, where applicable, sales volume (K MT), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of Types and Applications, harmonizes vendor attribution, and presents comparable time series by company, Type, Application, and region/country, including indicative price bands (US\$/K MT) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for brand owners, manufacturers, retailers, channel partners, and investors; data are structured with consistent units and fields to facilitate integration into internal FP&A and BI systems.
