Description

Differential Scanning Calorimetry, or DSC, is a thermal analysis technique that looks at how a material's heat capacity (Cp) is changed by temperature. A sample of known mass is heated or cooled and the changes in its heat capacity are tracked as changes in the heat flow. The differential scanning calorimeter (DSC) is a fundamental tool in thermal analysis. It can be used in many industries, including pharmaceuticals, polymers, food, paper, printing, manufacturing, agriculture, semiconductors, and electronics.

The major players in global Differential Scanning Calorimeter (DSC) market include TA, NETZSCH, Mettler-Toledo, etc. The top 3 players occupy over 60% shares of the global market. Europe is the main market, and occupies about 50% of the global market. Heat Flux DSC is the main type, with a share about 100%. Polymers is the main application, which holds a share about 40%.
