### Description

Piezoelectric Positioners are those which utilize piezoceramic devices, such as Piezoelectric Actuators or Piezoelectric Motors to produce the motion of the positioning platform. Piezoelectric motion can result in very precise position control, such as that of Micropositioners, or Nanopositioners where position accuracy is measured in microns or nanometers. A Piezo Positioners stage is defined as a positioning device capable of nanometer or sub-nanometer resolution. There are several types of Piezo Positioners; devices featuring the highest dynamics and precision are piezo-driven, flexure guided and equipped with direct metrology position feedback, such as capacitive sensors. Air bearing stages can also provide nanometer resolution and excellent guiding accuracy over long travel ranges. This report studies the Piezo Positioners market, from angles of Company, regions, product types and end industries, to analyze the status and the future.

Global Piezo Positioners key players include Physik Instrumente, Aerotech, SmarAct GmbH, Mechonics AG, Attocube, etc. Global top five manufacturers hold a share about 55%. North America is the largest market, with a share about 35%, followed by Europe and Asia-Pacific, both with a share about 30 percent. In terms of product, Linear Piezo Stages is the largest segment, with a share about 75%. And in terms of application, the largest application is Optical Component, followed by Metrology Equipment, Precision Finishing, etc.

### Report Scope
