### Description

Powered Pressure Washer is a high-pressure mechanical sprayer used to remove loose paint, mold, grime, dust, mud, and dirt from surfaces and objects such as buildings, vehicles and concrete surfaces. The volume of a pressure washer is expressed in gallons or liters per minute, often designed into the pump and not variable. The pressure, expressed in pounds per square inch, pascals, or bar (deprecated but in common usage), is designed into the pump but can be varied by adjusting the unloader valve.

A typical Powered Pressure Washer has electrical powered motor that powers a water pump. The pump accelerates the water, supplied from a garden hose, to produce high pressure. The washer is hooked to a high pressure-rated hose. At the end of the hose is a water gun that looks similar to the pressure guns used at car washes. When the trigger is pulled, the water mixes with the air and comes out of the nozzle.

North America Powered Pressure Washer main players are Karcher, Briggs&Stratton, TTI, Annovi Reverberi (AR), Clearforce, etc. Top five manufacturers hold a share about 50%. In terms of product, Electric Motor is the largest segment, with a share over 80%. And in terms of application, the largest channel is residential.
