Description

A sewage submersible pump is a device used to transfer sewage, effluent and septic tank water to and around a treatment location, which has a hermetically sealed motor close-coupled to the pump body. The whole assembly is submerged in the fluid to be pumped. The main advantage of this type of pump is that it prevents pump cavitation, a problem associated with a high elevation difference between pump and the fluid surface. Globally, the high-end sewage submersible pump industry market is relatively concentrated because of the R&D barrier. And some enterprises, like Grundfos Group, KSB and Xylem, etc. are well-known for the wonderful performance of their sewage submersible pump and related services.

The top 5 manufacturers has dominate market share in the high end market and there are many small manufactures in China and India are trying to capture more market share through its low price and good aftersales service
