Description

A Soft Ice Cream Machine is a machine used to make quantities of ice cream for consumption. Soft Ice Cream Machine may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture. A Soft Ice Cream Machine has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete.

Global Soft Ice Cream Machines key players include Taylor, Carpigiani, Nissei, Electro Freeze, Stoelting, etc. Global top five manufacturers hold a share about 85%. Asia-Pacific is the largest market, with a share about 35%, followed by North America and Europe, both with a share about 25 percent. In terms of product, Multi Cylinder is the largest segment, with a share about 70%. And in terms of application, the largest application is Catering Industry, followed by Entertainment Venue, Shop, etc.
