Description

Solar Thermal Collector collects heat by absorbing sunlight. A collector is a device for capturing solar radiation. Solar radiation is energy in the form of electromagnetic radiation from the infrared (long) to the ultraviolet (short) wavelengths. The quantity of solar energy striking the Earth's surface (solar constant) averages about 1,000 watts per square meter under clear skies, depending upon weather conditions, location and orientation.

Global Solar Thermal Collector key players include GREENoneTEC, Viessmann Werke, Solectrol, Solhart, Dimas, etc. Global top five players hold a share about 5%.

China is the largest market, with a share about 80%, followed by Europe and North America, having a total share about 10 percent.

In terms of product, Evacuated Tube Collectors is the largest segment, with a share about 70%. And in terms of application, the application includes Space Heating Applications, Process Heat Applications, etc.

Report Scope

This report quantifies the global Solar Thermal Collector market in revenue (US\$ million) and, where applicable, sales volume (K sqm), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of types and applications, harmonizes vendor attribution, and presents comparable time series by company, type, application, and region/country, including indicative price bands (US\$/K sqm) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for manufacturers, new entrants, channel partners, and investors; the report also reviews technology shifts and notable product introductions relevant to Solar Thermal Collector.

Key Companies & Market Share Insights

This section profiles leading manufacturers, combining 2021–2025 results with a 2026–2032 outlook. It reports revenue, market share, price bands, product and application mix, regional and channel mix, and key developments (M&A, capacity additions, certifications).
