Description

A Steam Dryer is industrial drying equipment that utilizes the latent heat of steam to transfer heat to the material being processed, to drive off water. The steam dryer using steam as the heating mechanism, which represent the low temperature drying technology for many organic materials, chemicals, petrochemicals, food industry and very small particle materials. The steam dryers used to be the indirect dryers with the rotating shell and rows of steam tubes, but there is another drying technology: Superheated steam drying, which contains the superheated steam directly contacting with the dry material recently.

The major players in global Steam Dryer market include MES, Mesto, Tsukishima Kikai, etc. The top 3 players occupy about 30% shares of the global market. Europe and Japan are main markets, they occupy about 60% of the global market. Automatic is the main type, with a share about 75%. Mineral processing and manufacturing is the main application, which holds a share about 50%.
