### Description

A Steckel mill, also known as a reversible finishing mill, is similar to a reversing rolling mill except two coilers are used to feed the material through the mill. One coiler is on the entrance side and the other on the exit side. The coilers pull the material through the mill, therefore the process is more similar to drawing than rolling. The material is fed back and forth through the mill until the desired thickness is reached, much like a reversing rolling mill.

Global key players of Steckel Mills include Danieli, Primetals Technologies, Northern Heavy Industries Group and SMS, etc. Top three players occupy for a share about 72%. North America is the largest market, with a share about 30%, followed by Europe and China. In terms of product, Twin Stand is the largest segment, with a share over 66%. In terms of application, Carbon Steel is the largest market, with a share over 54%.
