### Description

Synthetic fiber slings can be made from polyester, nylon, or high-performance materials and are lightweight, easy to rig, and extremely flexible. Besides, synthetic Fiber Sling has the advantages of light portability, easy maintenance and good chemical resistance. There are two types of synthetic fiber slings: web Slings and round slings. Web Slings are flexible, lightweight, and have a flat construction, normally with eyes at both ends. The flexibility of the sling helps to reduce shock loading effects. It is also important to note that the load-bearing yarns of the sling come in direct contact with the load. Round slings, however, are a continuous loop of yarn covered by a woven tubular casing. This casing comes in direct contact with the load, which helps to protect the load-bearing yarns inside.

Synthetic Fiber Sling has the advantages of light portability, easy maintenance and good chemical resistance. Globally, the main manufacturers of Synthetic Fiber Sling include Juli Sling Co. Ltd, Cortland Company and Gostern Rigging Co. Ltd. Among them, Juli Sling Co. Ltd has the largest market share of approaching 15%. China is the largest market, holds a share over 35%.

### Report Scope

This report quantifies the global Synthetic Fiber Sling market in revenue (US\$ million) and, where applicable, sales volume (K MT), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
