Description

This report studies the Tablet Rotary Presses market.

There are 2 types of tablet presses: single-punch and rotary tablet presses. Most high speed tablet presses take the form of a rotating turret that holds any number of punches and dies. As they rotate around the turret, the punches come into contact with cams which control the vertical position of each punch. Tablets produced by a rotary tablet press are compressed into uniform size, shape and weight making it the preferred machine for large-scale manufacture as it also produces more tablets than single punch machines.

Global Tablet Rotary Presses key players include Fette, KORSCH, Romaco, etc. Global top three manufacturers hold a share about 20%.

Europe is the largest market, with a share about 45%, followed by USA and China, both have a share about 40 percent.

In terms of product, Low Speed Presses is the largest segment, with a share about 60%. And in terms of application, the largest application is Pharmaceutical Industry, followed by Laboratory Research, General Industry, etc.
