### Description

Tapered roller bearings are bearings that can take large axial forces as well as being able to sustain large radial forces. Tapered roller bearings (TRBs) utilize rolling elements that are shaped like a truncated cone, and are constructed so that all tapered surfaces converge at a common apex point on the bearing centerline to yield true rolling motion. Tapered roller bearings are generally used in lower speed, high load applications and are capable of absorbing radial and/or axial loads. The internal angles may be designed to tailor the bearing to the loading demands of a specific application. Tapered roller bearings are a separable two-piece design (cup and cone) ; which, allows the end-use to optimize the internal clearance (and life) for each application when the bearing is mounted.

Global Tapered Roller Bearings key players include SKF, NTN, JTEKT, Timken, etc. Global top four manufacturers hold a share over 30%.

USA is the largest market, with a share over 20%, followed by China, and Europe, both have a share about 40 percent.

In terms of product, Single-Row is the largest segment, with a share over 85%. And in terms of application, the largest application is Automotive, followed by Heavy Machinery, Aerospace, Medical, etc.
